

## DEVICE WITH AN ELECTROMOTOR

## FIELD OF THE INVENTION:

The invention concerns an arrangement having an electric motor, and in particular having an electronically commutated motor (ECM).

BACKGROUND: Examples of such motors are shown, for example, in the following documents [of the Applicant]  
assigned to the assignee of the present application:

DE 44 41 372 A1	[(internal: D183)]	= 5,845,045 JESKE
EP 0 658 973 B1	[(internal: EP184)]	= 5,590,235 JESKE
DE 296 06 939.6-U	[(internal: D190i)]	= EP 0 739 084 A2
DE 195 15 944 A1	[(internal: D192)]	
EP 0 741 449 A1	[(internal: EP193)]	= 6,163,117
EP 0 744 807 B1	[(internal: EP194)]	= 5,847,523
DE 195 18 991 A1	[(internal: D195)]	
DE 196 47 983 A1	[(internal: D199i)]	= 6,091,887
EP 0 780 962 A2	[(internal: EP200)]	

It would not be possible to reproduce the extensive content of these documents even in summarized form, and reference is therefore made to their complete contents.

## SUMMARY OF THE INVENTION:

It is an object of the invention to make available a new arrangement and a new method for controlling an electric motor.

According to the invention, this object is achieved by connecting an output signal of a microprocessor, which can take on either a high level or a low level, to a voltage divider which regulates motor current, and varying the microprocessor output signal to achieve a desired motor current characteristic curve. [the subject matter of claim 1]. It is possible thereby, in program-controlled fashion, either to extend acceleration (called a "soft start") or to make acceleration as short as possible by

91  
Cont  
raising the operating point for the current control system during the acceleration period so that the motor current can be higher during acceleration than later in normal operation.

A preferred method is to set a motor current limit to a first value for motor startup, to monitor the startup, and to reset the motor current limit to a second value after startup. [the subject matter of claim 11]. This method can be flexibly adapted to the needs of a user, since the limiting values can be adjusted in program-controlled fashion.
